

Alex Donnelly

AI Adoption & Enablement | Responsible GenAI in Law Firms

Highland Park, IL · (847) 338-8208 · a.james.donnelly@gmail.com

See the work

The heart of this application lives on the web. For the AI Adoption Specialist role I built a complete, working portfolio — a live site with the actual kinds of deliverables I would produce in the job. I would be glad if you took a look:

ajdonnelly.github.io/winston-ai-adoption

What you'll find there

- **A 90-day operational pilot deck** — the committee-ready framing of a bounded, responsible-AI adoption pilot
- **A responsible-AI enablement playbook** — guardrails, role-based onboarding pathways, vetted use cases and anti-patterns, and value-and-risk metrics
- **An interactive training module** — a self-paced Articulate Rise course: prompt → verify → protect, with an attorney owning every output · [open the module](#)
- **An adoption & risk tracker** — a working command center for a pilot cohort — charter, use cases, workshops, risk log, and value metrics
- **A companion audio briefing** — a short NotebookLM podcast that reinforces the module — multimodal by design
- **Writing on responsible AI adoption** — short essays on the people side of adoption, instructional design, client-driven demand, and why a firm needs a public AI position
- **A de-identified medical-chronology analysis** — a worked case study of five AI failure modes and the review techniques that catch each before it reaches an attorney

My résumé and cover letter are included separately. The site's samples are independent work created for this application; they are not affiliated with or endorsed by Winston Taylor, and are set at a fictional practice group.
